

Application No. 09/813,209  
Response to Office Action

Customer No. 01933

**Amendments to the Drawings:**

Fig. 7 has been amended to correct the spelling of  
"expansion."

Attachment: Annotated Sheet Showing Changes  
Replacement Sheet

**R E M A R K S**

Reconsideration of this application, as amended, is respectfully requested.

**THE DRAWINGS**

Fig. 7 has been amended to correct the spelling of the word "expansion".

Submitted herewith are a corrected sheet of formal drawing which incorporates the amendment and an annotated sheet showing the changes made thereto.

No new matter has been added, and it is respectfully requested that the amendment to Fig. 7 be approved and entered.

**THE CLAIMS**

Independent claims 1, 17 and 23 have each been amended to clarify the features of the present invention whereby claim content of the new claim report is input via a client web page in a format substantially similar to natural language, and whereby the new claim report is registered in the knowledge base section in a format including at least a claim title structured as a combination of predetermined items of definition information expressed in standard terms, based on the claim content in the format substantially similar to natural language.

In addition, claims 1-38 have been amended to make some minor grammatical improvements and to correct some minor antecedent basis problems so as to put the claims in better form for issuance in a U.S. patent.

No new matter has been added, and it is respectfully requested that the amendments to the claims be approved and entered.

#### THE PRIOR ART REJECTION

Claims 1-8, 11-30 and 33-38 were rejected under 35 USC 102 as being anticipated by USP 6,463,437 ("Mongilio"); claims 9 and 31 were rejected under 35 USC 103 as being obvious in view of Mongilio; and claims 10 and 32 were rejected under 35 USC 103 as being obvious in view of the combination of Mongilio and USP 6,389,426 ("Turnbull et al"). These rejections, however, are respectfully traversed with respect to the claims as amended hereinabove.

When problems are reported with products, claims are reported by field servicemen and supplied to a product technology department, which is responsible for the products. In the product technology department, a design engineer takes charge of a claim report relating to a product which the engineer developed. The engineer confirms the content of the claim

report, studies the cause of the claim content, and prepares a solution.

Immediately after a new product is released, a variety of problems are typically discovered. During this time immediately after a product is released, design flaws are not immediately recognized and solutions to them are not established in a knowledge base. As a result, many of the claims for the problems are subjected to review by the design engineer. This review process imposes a significant burden on the engineer, takes time away from the engineer's development of the next new product.

To cope with this situation, according to the present invention as recited in amended independent claim 1 (and corresponding amended independent claims 17 and 23), a new claim report, corresponding to a new claim, is registered (by a claim handling section) in the knowledge base section and the registered new claim report is managed as an unsolved claim requiring an answer from the engineer. The claim content of the new claim report is input via a client web page in a format substantially similar to natural language, and the new claim report is registered in the knowledge base section in a format including at least a claim title structured as a combination of predetermined items of definition information expressed in standard terms, based on the claim content in the format substantially similar to natural language.

When claim content is entered by a client in a format close to a natural language, the same problem is likely to be expressed by different clients using different terms. When this occurs, it is likely that duplicate claims will not be recognized.

According to the present invention as recited in amended independent claims 1, 17 and 23, however, at least the title of the new claim is expressed using standard terms, even though the claim content is input in a format substantially similar to natural language. Therefore, redundant registrations of claims in the knowledge base is essentially prevented. As a result, the design engineer does not need to review any claim report other than the ones that are confirmed as being new, thereby reducing the burden on the design engineer. Moreover, since the new claims are efficiently identified for the design engineer, the review of new claims is not delayed and a client's wait time for resolution of a new problem is reduced.

In addition, according to the present invention as recited in claims 2, the knowledge base section is searched for claims that are similar to the new claims. When a desired solution is obtained by this search, it becomes unnecessary to manage a new claim report as an unsolved claim requiring an answer from the engineer.

Mongilio, by contrast, discloses a system for processing customer issues using a server, with reduced human intervention. According to Mongilio, when a customer accesses a vendor

server 14 and views a vendor website, a user system 22 may perform a self-help routine for checking a customer issue database 18 on the basis of entries to fields 38 of a customer issue form provided by the server.

That is, in the system of Mingilio, fields 38 (which are, for example, drop down menus) are provided to allow a customer to describe an issue. The customer simply chooses the correct entry from the drop down menu, and that entry is automatically entered into the field associated with the drop down menu. This increases accuracy in the definition of the customer issue and provides for automatic processing by the vendor server 14.

It is respectfully submitted, however, that the drop down menu based self-help feature of Mongilio inputs claim information in a structured format, and not in a natural language format. And if additional remarks are necessary, Mongilio discloses that a "field for comments by the customer" is provided in the issue form to allow additional remarks to be entered.

Nevertheless, it is respectfully submitted that Mongilio does not at all disclose, teach or suggest that at least the title of a new claim report is expressed in standard terms, based on the claim content in the format substantially similar to natural language.

Thus, according to Mongilio, even if comments are written in a natural language format in the "comments" field, the natural

language comments are not used to create a title of a new claim report that is expressed in standard terms, such that older claim reports are searchable by the standardized title of the new claim report, in the manner of the claimed present invention as recited in amended independent claims 1, 17 and 23.

In view of the foregoing, it is respectfully submitted that the present invention as recited in amended independent claims 1, 17 and 23, as well as claims 2-16, 18-22 and 24-38 respectively depending therefrom, clearly patentably distinguishes over Mongilio, taken singly or in combination with Turnbull et al, under 35 USC 102 as well as under 35 USC 103.

\* \* \* \* \*

Entry of this Amendment, allowance of the claims and the passing of this application to issue are respectfully solicited.

If the Examiner has any comments, questions, objections or recommendations, the Examiner is invited to telephone the undersigned for prompt action.

Respectfully submitted,

Douglas Holtz
